

# High-Efficiency Toilet Rebate Program for Multi-Family Residential Properties

*Rebate Incentives for Improving Water Efficiency*

## High Efficiency Toilets - HET dual flush or 1.28 gpf or less

( Rebate is for replacing an existing 3.5 gpf or higher - not for replacing an existing 1.6 gpf or 1.28 gpf or less )

**\$100 REBATE** per fixture or more

*\* New Construction - Installation of a 1.28 gpf or less HET is eligible for a \$30 REBATE per fixture.*

High-Efficiency Toilets (HETs) flush at 20 percent below a ULFT, equating to 1.28 gallons per flush. The average water savings for HETs is estimated to be 38 gallons per day (gpd) when replacing an average, non-efficient toilet and 7 gpd when replacing a ULFT.

*Save Water, Save A Buck now endorses the EPA's WaterSense labeled High-Efficiency Toilet list.*

**Please Note:** Many high-efficiency toilets are sold in two parts, with the tank and bowl sold separately. When components combine to make a WaterSense labeled product, tanks should include the words "When used in combination with [bowl model number/name]" in close proximity to the label, and similarly with bowl labeling. Only combinations listed below have been certified to bear the WaterSense label.

**Maximum Performance (MaP):** This list also provides flush volume performance data as indicated by the Maximum Performance (MaP) test. MaP is the most widely accepted assessment for determining flush volume and is a requirement for WaterSense certification to ensure satisfactory performance. A toilet should be able to reliably flush at least 350 grams of waste in order to properly perform; flush volumes above 500 grams will perform very well.

RF – Round-front toilet bowl. EL – Elongated-front toilet bowl. ADA- Meets bowl-height requirements of Americans with Disabilities Act; does NOT imply that fixture meets any other ADA requirement. NM - Not measured: WaterSense-certified fixtures that were not Maximum Performance (MaP) tested; these fixtures meet the minimum 350 gram waste removal threshold.
